DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a semiconductor package, classified in class 257, subclass 778.
- II. Claims 13-15, drawn to a method of fabricating a semiconductor package, classified in class 438, subclass 108.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group I invention could be made by a material different process. For example, positioning the solder bumped semiconductor chip in contact with the surface metallized substrate, and then injecting a no-flow underfill in a space between the semiconductor chip and the surface metallized substrate, instead of disposing a no-flow underfill to the surface metallized substrate and positioning the solder bumped semiconductor chip in contact with the surface metallized substrate.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
